

SINGLE BOLT SUSPENSION CLAMP

TYPE 316 STAINLESS STEEL

CATALOG #SBSC-316SS

Strand Size: 1/4" thru 7/16" Diameter

Material: AISI Type 316 Stainless Steel

The single bolt type is used for light cables and on cable arms, while the three bolt is for heavy cables and on long spans. Two 1/2" high strength bolts are assembled on the three bolt clamp. When attaching the clamp to the pole, one or more nuts or washers are placed between the clamp and the pole to provide clearance for the cable. Where messenger strand is used as an overhead static ground wire these clamps facilitate attaching to the bayonet.

Curved clamps are used for supporting messenger strand at angles in the line. Ends are curved to prevent damage to strand wires.
